

Sound Money:

Central bank control of the money, limitless money creation, US debt and the resulting inflation tax it creates are destroying our children's future. Drastically reducing the size of government, greatly reducing the budget, getting back to sound money, ending the federal reserve cartel, and separating money from politics are some of my targets. We should end all corporate bailouts, subsidies, and crony capitalism, bringing back real free markets. There is a myth that the government keeps corporations in check. The fact is that the governments and their monopoly on violence, rules, regulations, licensing & overall bureaucracy that allow corporate monopolies to form and thrive. How you choose to spend your dollars has a greater impact on corporate behavior than does your vote for politicians.
